

## QPR ProcessDesigner 2022.1

The new release makes modeling easier for faster results. Highlights include role-based modeling aids, support for industry specifications, and more flexibility in navigating between diagrams.

### Easy and enjoyable modeling

#### Role-based ribbon

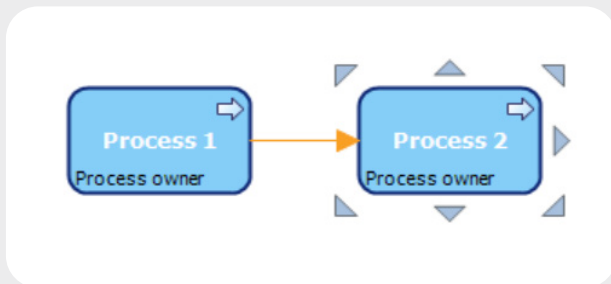

The Client comes with predefined ribbons, each optimized for a different user group, such as beginners, advanced users, and administrators. You can also configure your own ribbon. Your work is easier when your tools support your role.

#### Fresh Client user interface

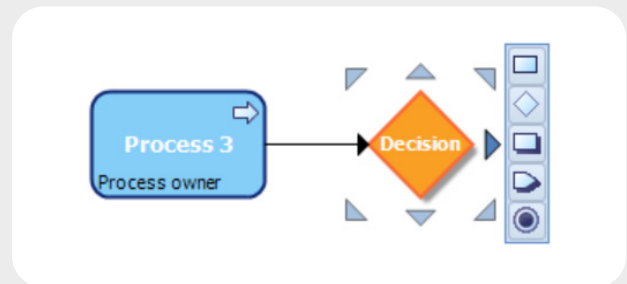

Updated color schemes and command button icons make for a clean and modern look.

#### Enhanced quick modeling

Modeling just got even easier with the quick modeling mode offering two ways of creating content. One is to create a copy of an existing element, which will carry forward customized graphical properties and attributes. The other way is to pick the next element from a popup menu, called the element type selector, containing your favorites. Just add the element to your favorites for the quick modeling mode to pick them up.

Quick modeling hotspots copy the element.

Element type selector displays your favorites.

### Improved interoperability

#### BPMN 2.0 import and export

Import process models in XML format from other process modeling tools at a click of a button. Alternatively, this feature comes in handy when exporting process models to another tool, such as a process workflow engine.

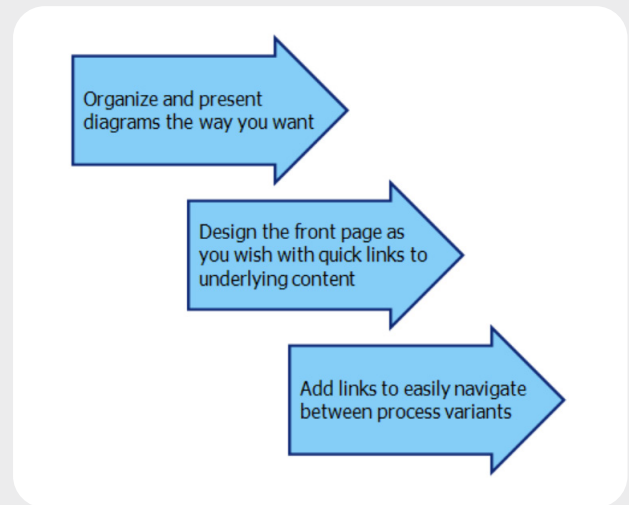

## Modeling enhancements

### Navigate freely between diagrams

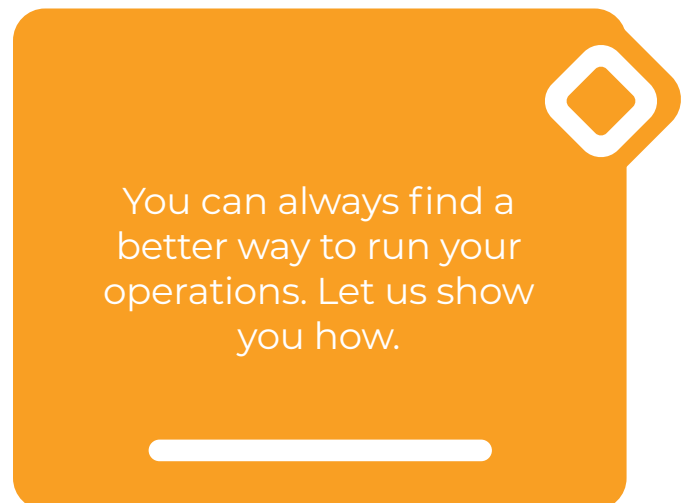

Move freely between diagrams by adding a diagram link to any element or connector. Use it to give drill-down functionality to non-hierarchical elements, jump over process levels, or to provide a quick link to any other diagram.

This new feature make story telling easier by making logical connections between content.

## 30 years of operational excellence

For more than three decades, QPR Software has been at the forefront of innovation with software solutions that give organizations the tools to manage their operations, the confidence to make bold decisions, and the ability to outsmart the competition.

*QPR Software Plc (Nasdaq Helsinki) provides process mining, performance management and enterprise architecture solutions for digital transformation, strategy execution and business process improvement in over 50 countries. QPR software allows customers to gain valuable insights for informed decisions that make a difference.*
