

Peab Finland boosts process reporting in construction sites and business units with QPR Metrics

Peab Finland is monitoring the performance of its construction sites and units with a solution delivered by QPR. Thanks to this solution, information is up-to-date, transparent and in a uniform format. Systemization has substantially saved the time used for reporting. The need for a uniform and systematic performance monitoring actualized when Peab Finland introduced its ISO 9001 certified integrated management system in 2009.

Peab Finland has ten branch offices. In addition to the construction sites, Peab Finland monitors performance of its individual employees. The QPR Metrics powered Peab performance management solution comprises 50 measures. Peab is not monitoring just the normal operational performance, but Work Safety is one of the key measures.

Substantial work time savings thanks to automatization

Information is collected monthly from Peab Finland's construction sites. Annually, the 50 measures in use equals to a total of 200 pieces of information from each site. This information is consolidated first on the business unit level and then on the company level.

Prior to introducing the QPR powered performance management solution, Peab Finland was using Excel spreadsheets for performance reporting. Collecting and compiling masses of information with Excel into various reports was taking hundreds of hours. Now all this is done with QPR Metrics.

“The time-wise savings are really material. Now we can focus on the essential, that is, analyzing the results and planning the needed actions.”

- Timo Laapio, Development Manager, Peab Finland -

“The time-wise savings are really material. Now we can focus on the essentials, that is, analyzing the results and planning the needed actions”, says Development Manager **Timo Laapio**.

Dashboards deliver a comprehensive picture from the site

With the QPR powered performance system, all information is now found in one place, is up-to-date and in a uniform format. All key measures used in the construction site are collected in one dashboard view. This dashboard has been positively welcomed in the construction sites.

“Just a few minutes is enough to obtain a good and comprehensive understanding of where the site is going”, tells Operations Controller **Timo Koppelomäki**.

Fast deployment with QPR’s support

Peab Finland’s performance management system was deployed fast with the help of QPR’s technical consultants.

In addition to Mr. Laapio and Koppelomäki Peab Finland project team included project manager **Taru Puhto**. She had a major responsibility in planning, piloting and testing the performance management system.

QPR Software is specialized in operational development of private and public sector organizations. Our mission is to help our customers to become agile and efficient in their operations. We offer software and services in areas of enterprise architecture development, process modeling and analysis as well as performance management. We have more than 1,500 customers in over 50 countries and our shares are listed on the NASDAQ OMX Helsinki Ltd.
