QPR ProcessDesigner 2022.1

The new release makes modeling easier for faster results. Highlights include role-based modeling aids, support for industry specifications, and more flexibility in managing diagrams, tool palettes and favorites.

## Easy and enjoyable modeling

Role-based ribbon

The Client comes with predefined ribbons, each optimized for a different user group, such as beginners, advanced users, and administrators. You can also configure your own ribbon. Your work is easier when your tools support your role.
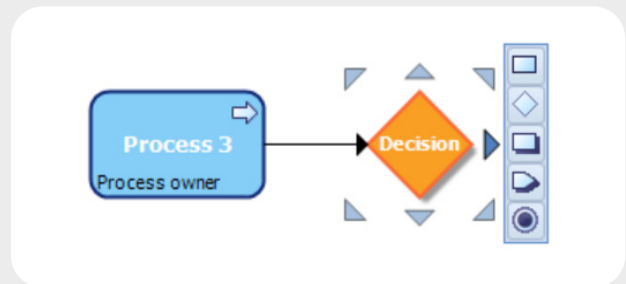

Fresh Client user interface

Updated color schemes and command button icons make for a clean and modern look.

Enhanced quick modeling

Modeling just got even easier with the quick modeling mode offering two ways of creating content. One is to create a copy of an existing element, which will carry forward customized graphical properties and attributes. The other way is to pick the next element from a popup menu, called the element type selector, containing your favorites. Just add the element to your favorites for the quick modeling mode to pick them up.

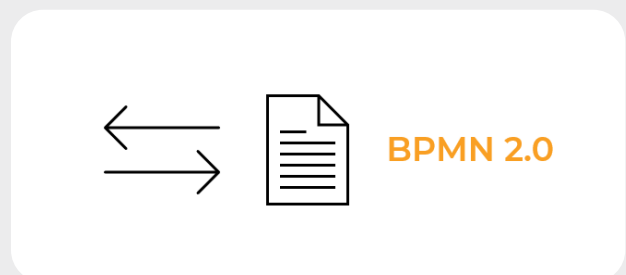

Quick modeling hotspots copy the element.

Element type selector displays your favorites.

Improved interoperability

BPMN 2.0 import and export

Import process models in XML format from other process modeling tools at a click of a button. Alternatively, this feature comes in handy when exporting process models to another tool, such as a process workflow engine.

BPMN 2.0

Modeling enhancements

Navigate freely between diagrams

Move freely between diagrams by adding a diagram link to any element or connector. Use it to give drill-down functionality to non-hierarchical elements, jump over process levels, or to provide a quick link to any other diagram.

Different ways of using the new diagram link.

Organize and present diagrams the way you want

Design the front page as you wish with quick links to underlying content

Add links to easily navigate between process variants

A new way to look at your operations

The new release creates the capability to implement our newest tool, the QPR BusinessPortal. The intuitive web portal is for publishing your business processes using modern UX features that decrypt modeling notations for the everyday user.

QPR BusinessPortal retrieves process flow information documented in your chosen modeling language, such as BPMN.

QPR BusinessPortal decrypts symbols by displaying process information through an intuitive and interactive user interface.

QPR Software Plc (Nasdaq Helsinki) provides process mining, performance management and enterprise architecture solutions for digital transformation, strategy execution and business process improvement in over 50 countries. QPR software allows customers to gain valuable insights for informed decisions that make a difference.
